WATERJET CUTTING SERVICES

Breedt Production Tooling and Design
811 1st Ave S
Kent WA 98032

Telephone: 425-488-4214

Need to save money?

Waterjet cutting costs less than other machining methods. In most cases, the quality of the cut achieved by a waterjet machine virtually eliminates additional finishing. Waterjet cutting is faster than other methods

and by using CAM/CAD technology we can produce identical parts every time and make changes quickly and easily. In many cases material can be stacked to decrease production costs. Scrap material remains intact and can be reused.

Breedt Production Waterjet Services

At Breedt, we offer experience, assistance and low cost rates to our customer. We can work with engineers and artists from the beginning of a project to assist in developing material applications which will allow them to take full advantage of the Waterjet process.

Need a simple cut?

Call or email us for a quote. See the back page for contact information.

Our Promises

- **Price match guarantee**
- **No programming fees**
- **No lot charges**
- **High quality edges**
- **Close tolerance profiling**
- **No heat affected zone**
- **Cuts, profiles and contours a wide variety of materials and material thicknesses.**

Breedt production tooling and design also works with all types of files and our engineers are ready to assist with product development and design.

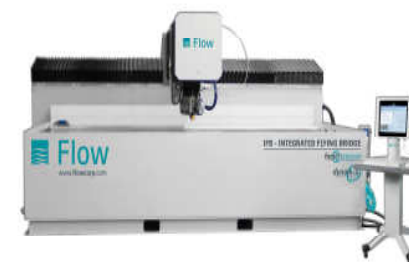

Also because we have metal fabrication abilities we can work with many parts after they have been cut. We can do so much more for you – including tooling, fabrication, machining, welding and of course design.

Send us your sketch

Drafting, reverse engineering and pick up and delivery services are available.

WHY FLOW WATERJETTS?

A bright guy named Hashish (no kidding) created modern day waterjet cutting at Flow. Breedt Production Tooling and Design only uses Flow waterjet cutting technology. Since Flow created this technology and has been at the forefront of innovation in the industry, Breedt choose them as our partner. Another nice thing is that FLOW is a local company based here in the Puget Sound. Our waterjet machine uses fine abrasive to speed up cutting time and allow us to cut a wide variety of materials. We use a 96" x 48 inch cutter which increases our ability to cut larger items.
